NES Metal Detectable Range

Suitable for the most stringent markets requiring detection and containment of contaminants

- Particle detection as small as 2mm
- Full range of standard and custom designed solutions available; including inflatable seals, mouldings and extrusion
- FDA and 3A (Class 1) compliant material available in Viton[®], NBR, EPDM and VMQ with the option of different levels of detectability
- Continued compliance to international regulations leading to over a decade of successful supply into Food and Pharmaceutical industries
- Available in blue as standard for easy product identification with many other colours available
- Extended lifetime due to NES' low industry compression set performance
- Operating range of -60°C to +230°C

NES Sheffield is the Integrated Polymer Solutions European HQ
